

Liver Support

Live right or you can say Liver on the right...our liver is located on the upper right side of our body, under the diaphragm, and on top of the stomach. It is a very important organ and is ALWAYS working even when we sleep ,having lots of responsibility for our bodies!

Our Liver is responsible for filtering the blood from our heart & intestine to meet at the liver. The blood that circulates from the heart contains oxygenated blood to the liver. The blood flow from the intestines has fats, carbohydrates, and vitamins. When the blood gets to the liver it then goes through a filtering process. The liver converts the carbohydrates into sugars for use in the body and what it can't use it immediately is stored for a later time.

Another very important function of the liver is its ability to filter toxins. Toxins filter from the liver through the kidneys to intestines and then gets excreted. The liver helps create blood plasma, assist with blood clotting, creates our hormones & vitamin D, and also stores extra glucose.

Liver takes the toxins and gets converted by cells called **HEPATOCTES** then converted into Bile. Bile is then sent to the gallbladder and then processed through the intestines to break down fats, break down microbes and aid in digestion.

Herbal Support:

MILK THISTLE

Silbum marianum: Plant parts used seeds. Milk Thistle is known as a powerful Liver detox support, helps rebuild liver cells, acts as an anti-inflammatory, blood cleaner and helps with regulating blood sugar levels
